

Operating Instructions

Retro Pindar Night Light

Operating Instructions

When this product is tested at the factory, there is only a small amount of battery stored. When you receive the product, it may be in a state of low power. If the product cannot work properly, please charge it in a timely manner.

Battery maintenance

1. When charging, connect the USB to the charging port on the lamp holder and plug the other end into a power socket. When the light is charging, the indicator light turns red, and the indicator light on the USB socket turns green, indicating that the light is fully charged. It is recommended that the rated voltage of the charger be DC5V and the current be ≤ 2 amps. Do not use fast charging to avoid affecting the battery life.

Battery life

1. We recommend releasing and fully charging within the first 10 cycles. After the battery is used up, it should be charged as soon as possible. If it is not charged for a long time, it will affect the battery life.
2. When the light is insufficient, please charge the battery in a timely manner to protect it. Please charge at least once a month. The battery of this lamp is non-replaceable, and when the battery life reaches a certain level, the lamp will be unusable.
